SERVICE MANUAL

JRC Japan Radio Co., Ltd.

DSP RECEIVER

INTRODUCTION

This manual describes the basic operating principles of the NRD-545DSP receiver and items required for its maintenance. Please refer to the User Manual supplied with the equipment for how to operate and handle the NRD-545.

The NRD-545 consists of eight units. Each circuit has been designed to minimize the number of locations that might require adjustment with the passage of time, and so increase operating stability. It is therefore only necessary to service the equipment according to the instructions contained in this manual when a fault becomes apparent.

Please refer to the table of units and be sure to enter the name and type on the form when ordering replacement unit.

Please refer to the parts lists and enter the unit type, part No., type, and code when ordering parts.
